

## The Rawnsley Woodland Products 'Logging Arch'

A new development of a very old Idea The RWP 'Logging Arch' is a simple yet highly efficient tool, for moving saw logs or long beams of timber.

With a simple 'Cam action' a whole 16ft x 12" log can be lifted up onto two wheels and then pushed or pulled where desired by hand.

Whether you are moving saw logs in a wood or manoeuvring beams or heavy timbers in a yard the 'logging arch' will save you the strain and quickly become indispensable.

- (1)** Move the 'Arch' over the log. Tilt it up whilst opening the tongs with the pull cord.

**(2)** Pull Handle downwards, engaging the tongs and lifting the Log

**(3)** Log is then balanced, up off the ground and on two wheels.

**(4)** And can then be moved to where you like!

Two sizes are available a small one as pictured for logs up to 12" diameter and up to 16ft long

And a large version that can take logs of up to 26" diameter and 16ft in length for towing behind an ATV, tractor or other vehicle it can also be used in combination with a winch.
